| Page 170 | THEO 371 is offered 2016-17 fall |

New courses:

BIOL 207 Human Anatomy

Every Year, Winter 3(3-0-3)

Introductory study of the human body which includes structural and functional components of selected systems. This course is designed to provide the student with a systematic description of the anatomical structure and function of the human body. Students will gain an understanding of human gross anatomy and a working knowledge of the integration of the human body's major physiological systems. Emphasis will also be placed on critical thinking, active questioning and an appreciation for health and disease from a gross anatomical perspective.

Same as PHED 207.

PHED 207 Human Anatomy

Every Year, Winter 3(3-0-3)

Introductory study of the human body which includes structural and functional components of selected systems. This course is designed to provide the student with a systematic description of the anatomical structure and function of the human body. Students will gain an understanding of human gross anatomy and a working knowledge of the integration of the human body's major physiological systems. Emphasis will also be placed on critical thinking, active questioning and an appreciation for health and disease from a gross anatomical perspective.

Same as BIOL 207.
